Addis Ababa, Ethiopia

About Me

I'm an AI researcher and backend developer with three years of RLHF experience fine-tuning LLMs and contributing to agentic AI at a US-based company. I've spent five years architecting efficient, scalable backend systems, underpinned by rigorous algorithmic thinking. As an ICPC World Finalist, I bring proven competitive-programming problem-solving skills to every AI and system-design challenge.

Skills

- Python
- RLHF
- LLM Fine Tuning
- Django
- React FastAPI
- PostgreSQL
- MongoDB
- TensorFlow C++
- CI/CD Pipelines
- Docker

Education

MSc Degree in Computer Science and Engineering — 2021-2022

Adama Science and Technology University

BSc Dual Degree in CSE & ECE — 2015-2020

Adama Science and Technology University

Experience

Team Lead · AI Human Data — Jun 2022 - Present

Turing (USA, Remote)

Worked as a Human Evaluator for AI models, assessing outputs using detailed rubrics to ensure quality and consistency, contributing to data creation for Agentic AI systems, and overseeing quality control across evaluation tasks.

AI Engineer Intern — Jan 2023 - Feb 2023

Scoville Co., Ltd. (Tokyo, Japan)

Worked on a machine learning project focused on text anonymization at Scoville Co., Ltd., a diverse Japanese company with team members from 17 nationalities, gaining valuable experience from ML experts in an inclusive, multicultural environment.

Senior Software Engineer — Jan 2021 - Oct 2024

Toptech IT Solution PLC

Co-founded the company and led backend development, designing scalable Django-based systems, implementing CI/CD pipelines, and ensuring high performance through testing, debugging, and system optimization.

ICPC Scientific Committee Head — Mar 2021 - Present

Ethiopian Collegiate Programming Contest

Created original problem sets and organized ICPC competitions, mentored students in algorithms and problem-solving, and managed contest logistics and technical setup.

Project

Seleda Classified

A modern Ethiopian online marketplace enabling seamless trade for wholesalers, retailers, and individuals, with integrated local payments (TeleBirr, Amole), messaging features, and a full-stack architecture using Django, React, PostgreSQL, Redis, Celery, and Docker for scalability and performance.

Andalus Competitive Programming Online Judge

A competitive programming platform developed to train students for ICPC by allowing automated code submission, evaluation, and contest hosting.

Publications

Handwritten Geez Digit Recognition using Deep Learning Developed a CNN-based model for handwritten Ge'ez digit recognition using a 50,000-sample dataset, with results published here.

Achievements&Awards

- ICPC 2021 World Finalist: Certificate
- Best Student Award of 2020 Adama Science and Technology University, School of Electrical Engineering and Computing
